

Announcement Russian GMO Training Course Advanced 2022

WAY2TRADE ►

There are important differences between the European and Russian GMO-legislation. The Russian authorities are enforcing the regulations in their country more and more, causing trade problems for feed producers and feed exporting companies all over Europe. The Russian legislation is more strictly monitored than before. In this course the differences in the legislation are explained, as well as an insight the political influences and moreover, you will be taught what to ask your lab in order to obtain an analysis and/or develop an analysis approach that gives you the guarantee you have respected the Russian legislation. Our aim is to raise awareness and educate companies involved in export to the Russian Federation to be able to make an informed choice on what analyses approach would fit best their needs.

Therefore Way2Trade teamed up with Eurofins GeneScan to develop this training. Our experience of more than 20 years of market access issues with Russia and the last 5 years in dealing with the GMO non-compliances detected by Rosselkhoznadzor this combined with the technical knowledge of GeneScan will give you a very detailed insight on possible ways to implement an analysis approach that will help you to gain and maintain market access for the Russian and EAEU market.

The Program

The training is an interactive online course of 3 hours, covering the following content.

Part I by Tjeerd den Hollander and Iris van Oosterhout-Faassen

- Short introduction on General information Russian market access for feed
- An outlay of the GMO legislation in Russia
- State of play with regard the Dutch situation
- Explanation Russian approach during inspection

Part II by Ulf Rathjens from Eurofins GeneScan GmbH

- How does GMO testing work (quantification of events vs screening approach and the combination)

- What is the correct question to ask your lab?
- Short overview of relevant tests per product category (from petfood, additives to feed with or without plant ingredients).
- How to make a choice for a tailor-made analysis approach or case by case testing

Part III Iris, Tjeerd and Ulf

- Interactive Q&A

The webinars are scheduled on:

- Monday 31st January 2022 from 12:00-15:00
- Wednesday 2nd February 2022 from 10.00-13.00
